If you're taking aesthetic shots rather than professional portfolio images, a fisheye lens can be a great way to bring style to your list of architectural photography tips. It's an ultra-wide lens that distorts the edges of your photo to give it a circular, looking-through-the-peephole effect.

16 Architectural Photography Tips - CreativePhotoConnect.com

Be sensitive to the direction of light as this can increase contrast, shadows, textures and reflections. High levels of contrast can fool cameras into exposing the scene incorrectly, but shooters can easily overcome this by applying exposure compensation. Another trick is to bracket shots at different exposure values (exposing one for the highlights, one for the midtones and one for the shadows) and later merge them in a dedicated HDR program (such as Photomatix).
