Genetics Punnett Squares And Incomplete

A Punnett square for a cross between two heterozygous snapdragons will predict the genotypes RR, Rr, and rr in a 1:2:1 ratio, and since these alleles display incomplete dominance, the phenotypes...

How to Use a Punnett Square to Demonstrate Incomplete

...

The Punnett square from this configuration is below. Here we see that there are three ways for an offspring to exhibit a dominant trait and one way for recessive. This means that there is a 75% probability that an offspring will have the dominant trait and a 25% probability that an offspring will have a recessive trait.

Probability and Punnett Squares in Genetics

And we can do these Punnett squares. They don't even have to be for situations where one trait is necessarily dominant on the other. For example, you could have the situation-- it's called incomplete dominance. Let's say you have two traits for color in a flower. You could have red flowers or you could have white flowers.

In the last lesson, Genetics, Introduction to Punnett Squares, we concluded with this image. Some traits are blended when combined. Incomplete dominance is one of the ways a variety of flowers are created. Mendel's laws helped us create Punnett squares where alleles were either dominant or recessive.

Lesson Genetics - Incomplete Dominance | BetterLesson

Slide 9 is a check for understanding of incomplete dominance, where the resulting Punnett square should look like: Slide 15 verifies the students' understanding of co-dominance. A tan cat cannot be heterozygous since the tan color requires two tan alleles. The ratio of phenotypes is two black: two tabby.

Seventh grade Lesson Incomplete Dominance and Co-dominance

We can still use the Punnett Square to solve problems involving incomplete dominance. The only difference is that instead of using a capital letter for the dominant trait & a lowercase letter for the recessive trait, the letters we use are both going to be capital (because neither trait dominates the other).
