concurrent with the 2015 U.S. Guidelines for Neonatal Resuscitation. The American Academy of Pediatrics, AHA and ACOG agreed that non-vigorous meconium-stained babies should be moved to the radiant warmer for initial steps and be resuscitated in the same manner as babies with clear amniotic fluid. When the Amniotic Fluid is Clear

Suctioning: Who, When and Why?

Meconium Non-vigorous newborns with meconium stained fluid DO NOT require routine intubation and tracheal suctioning Newborn Resuscitation "Meconium stained amniotic fluid is a perinatal risk factor that requires the presence of one resuscitation team member with full resuscitation skills, including endotracheal intubation" -NRP Instructor Update

Neonatal Resuscitation: What you need to know!

Meconium-stained amniotic fluid is a perinatal risk factor that requires the presence of one resuscitation team member with full resuscitation skills, including endotracheal intubation. Do you know how the 7th edition NRP materials originate?

Summary of the Revised Neonatal Resuscitation Guidelines

If meconium is present - clear the baby's mouth and nose and dry the baby, stimulate it, and reposition it. If meconium is absent - check to see if the baby is vigorous, meaning that the baby has a heart rate over 100 bpm, good muscle tone, and is making respiratory efforts. If the baby is vigorous - behave as if meconium were present

NRP Study Guide - National CPR Association

BACKGROUND AND OBJECTIVES: Recently, the Neonatal Resuscitation Program (NRP) recommended against routine endotracheal suctioning of meconium-stained nonvigorous newborns but suggested resuscitation with positive pressure ventilation. Our purpose is to study the effects of this change in management.

Meconium aspiration syndrome (MAS) is defined as respiratory distress in newborn infants born through meconium-stained amniotic fluid (MSAF) whose symptoms cannot be otherwise explained [1]. MAS can present with varying degrees of severity from mild respiratory distress to life-threatening respiratory failure.

UpToDate

In 2006, the American Academy of Pediatrics and the American Heart Association published the 2005 guidelines on neonatal resuscitation 1. The most significant effect of these guidelines on obstetric practice related to the management of delivery of a newborn with meconium-stained amniotic fluid. Before the 2005 guidelines, management of a newborn with meconium-stained amniotic fluid included suctioning of the oropharynx and nasopharynx on the perineum after the delivery of the head but ...

Delivery of a Newborn With Meconium-Stained Amniotic Fluid

Abstract Objective: To describe trends in the incidence and severity of meconium aspiration syndrome (MAS) around the release of revised Neonatal Resuscitation Program (NRP) guidelines in 2016.
