Freezer Temperature is Above 10 Degrees F (-12C) If the freezer temperature is above 10 degrees Fahrenheit (-12C), the ice maker will not produce ice cubes efficiently. The freezer temperature should be set between 0 and 5 degrees Fahrenheit (-18 to -15C) for the ice maker to work properly. If the freezer temperature is too high, ensure that the condenser coils are clear of debris and the condenser fan is working properly.

If your ice maker doesn't turn off (it keeps making ice) even when the ice bin is full: 1 Lift the bail wire to shut off the ice maker, and remove the ice bin. Using a screwdriver if necessary, remove the ice maker, clean it thoroughly, and then reinstall it. 2 If the problem persists, consider replacing the ice maker and valve. You can do this yourself, as discussed below, or have an appliance repair person do it.
