Wired For Speech How Voice

Wired for Speech presents new theories and experiments and applies them to critical issues concerning how people interact with technology-based voices. It considers how people respond to a female voice in e-commerce (does stereotyping matter?), how a car's voice can promote safer driving (are "happy" cars better cars?), whether synthetic voices have personality and

In *Wired for Speech*, Clifford Nass and Scott Brave reveal how. How interactive voice-based technology can tap into the automatic and powerful responses all speech--whether from human or machine--evokes. Interfaces that talk and listen are populating computers, cars, call centers, and even home appliances and toys, but voice interfaces invariably frustrate rather than help.

Wired for Speech demonstrates that people are 'voice-activated': we respond to voice technologies as we respond to actual people and behave as we would in any social situation. By leveraging this powerful finding, voice interfaces can truly emerge as the next frontier for efficient, user-friendly technology.
